1	Objectives	4
2	Methods.....	5
3	Results.....	6
4	Appendices.....	9

1 Objectives

The objectives relating to this deliverable are:

1. To develop communications channels between WP3 and WP leads;
2. To develop an internal reporting system for WP tasks, activities, progress with milestones and deliverables, and high quality achievements;
3. To define specific evaluation measures of timeliness, nature and quality tailored to each WP task, milestone and deliverable;
4. To develop the evaluation monitoring process.

2 Methods

In-depth discussions between WP3 partners, the overall project lead and KITE took place in relation to each of the objectives. The communication channel was discussed at the consortium meeting in June 2015 in Edinburgh and on further consortium conference calls. Draft versions of the internal reporting templates were developed and refined following feedback from WP3 partners, the overall project lead and KITE. Specific evaluation outcome measures were drafted for each WP task and sub-task. Where possible accepted measures were adopted and adapted – e.g. the PRISMA statements for Preferred Reporting Items for Systematic Reviews and Meta-Analyses in WP6. These draft measures were refined following feedback from each WP partner. The evaluation monitoring process suggested was agreed at a conference call of the WP leads.

3 Results

The results related to each objective are:

Objective 1- communications channels

A member of the WP3 team will be included in all WP conference calls and communications, as well as consortium calls. Further contact will take place via email and telephone as required.

Objective 2 - internal reporting system

A three-monthly reporting template has been developed and is available on Sharepoint. The three monthly activity reports contains:

1. A management overview;
2. A description of the progress towards the scientific and technological objectives;
3. The identification of the problems and suggested corrective action to be taken;
4. Progress towards publication.

There are 2 sections to the report. Section A is to be completed by WP leads only who will report on their WP. Section B is to be completed by all partner organisations (one report per partner organisation only). All partners will provide brief details of activities across all WPs and tasks they are involved in. The form needs to be completed and returned no more than one week after the end of the reporting period. WP3 will consolidate the information provided into a summary report which will be distributed to all partners and uploaded to SharePoint. The reporting template is given in Appendix 1.

For the first quarter reporting period, all partners completed their template and emailed to RGU where these were refined and collated into one document which was loaded onto Sharepoint. In future, each partner will be sent a WP specific template listing all tasks active during the reporting period. However, they will be asked to report progress with all milestones and deliverables.

Objective 3 - specific evaluation measures

Detailed measures of timeliness, nature and quality have been developed and agreed for all WPs other than WP1 (which is the general management and monitored through other modes) and WP5 (where the criteria are in draft form pending further WP5 discussions). These criteria are set at the sub-task level to allow in-depth evaluation of progress, which provides an early warning detection system for the tasks being completed, the milestones met and the deliverables being within time and of high quality. The evaluation criteria for each WP are available on Sharepoint and are given in Appendix 2.

Objective 4 - evaluation monitoring process

Evaluation will be regular and ongoing. One member of the WP3- team with the relevant methodological expertise has been assigned to each WP. That member will be included in all WP conference calls with further contact with the WP lead if required. The evaluation report will be updated regularly on Sharepoint in terms of the criteria of timeliness, nature and quality. Any issues will be highlighted, discussed with the WP lead and contingency measures identified. These will be shared with the project lead, KITE and other members of the consortium if required.

The following standard operating procedure will be employed for each deliverable.

1. Before the due date the appointed evaluator for WP3 will contact the WP Leader to determine the status of the deliverable for progress update and provide a timescale for completion;
2. At least 4 weeks before due date of deliverable the WP leader reports status of deliverable and provides material, results etc;
3. At least 3 weeks before due date evaluation team give written feedback to WP leader (together with coordinator) according the predefined evaluation criteria
4. At least 2 weeks before the due date if evaluation criteria are not met WP leader has to propose and agree changes with the evaluation team in order to meet the evaluation criteria;
5. At least 1 week before the due date WP leader provides final version of deliverable;
6. Evaluation team and coordinator approve the final version before the deadline;
7. The Project Management Office submit the deliverable in the Participant Portal.
